

BridgeTab3 quick start manual

App

Go to Google Play Store and search for BridgeTab. Make sure that you select **Bridgetab 3**. Then click the link to Jannersten Förlag AB and also install TD Call 3.

Basic Settings

First of all you should switch off Auto-rotation on the tablets. You might also want to change the font size, which is done via the [SETTINGS button](#) on the BridgeTab's [Start screen](#).

Dummy mode

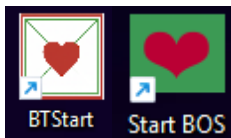

You should first try the app in DUMMY MODE, if you are not familiar with BridgeTabs.

PC program

You will need to install the new BOS package to run BT3:

<https://www.bridgetab3.com/download/bossetup.exe>

You will find two icons on the Desktop after installation

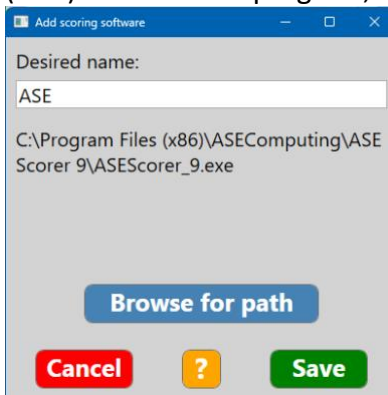

First test of the entire system

Start BOS and open the DEMO event. Click the big green SCORING button and accept to open the last used database (demo.bws). Log in as table 1. Instruction video: <https://www.bridgetab.com/step-by-step-demo>

Add Scoring program

The scoring program that you want to add to the list must be installed on your PC. Enter a desired (nick)name for the program, browse for the path to it, and then click Save.

Licence

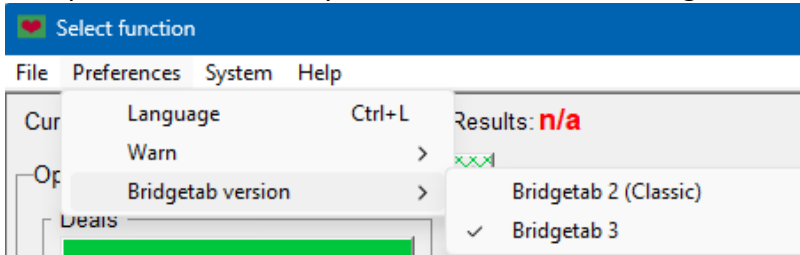

When you are ready to run a real game the recommendation is to first get a test licence that is good for up to 15 tables.

When you have consumed the test licence you can buy a licence in the control program's [Licences menu](#).

BridgeTab 2 users

There is a switch between BridgeTab 2 and 3 in BOS's Preferences menu. Note that it can lead to unexpected situations if you start an event with BridgeTab 2 and switch to BridgeTab 3 during the game.

Help

The orange/yellow button in the applications lead to help texts explaining the screen that you clicked [the help button] on. You can also reach the help library from here: <https://www.jannersten.com/Help/BTC/>

Updates are published frequently so make sure that you install the current version of both app and control software if you come across a problem. You can send a Report Problem ([big green button in BOS's main u.i.](#)) to support@bridgetab.com if the problem would persist.
